ABSTRACT

Title: "JARVIS - Voice Assistant

The project "Jarvis" is a versatile voice assistant designed using HTML, CSS, and JavaScript, leveraging the power of various APIs for dynamic functionality. The system enables users to interact with their devices through voice commands, performing tasks such as web browsing, data retrieval, setting reminders, and accessing real-time information like weather updates or news. By integrating APIs, Jarvis offers enhanced capabilities like language processing, speech recognition, and seamless response generation. With a sleek, user-friendly interface and an emphasis on hands-free operation, Jarvis is crafted to boost productivity, improve accessibility, and deliver a personalized, efficient user experience across multiple platforms.
